ArioPrint sells into growing Pakistani market

Arioli SpA, the manufacturer of the ArioPrint (digital textile printing machine), has sold four machines to Sarena Industries and one to Sapphire Textile in Pakistan, and considers Pakistan as one of the fastest growing markets in the world.

Gianluca Macchi, Arioli, Area Sales Manager said, "Pakistan is a very big market, I would say the fastest growing digital market in the world. Our machine has 16 print heads which, due to its software and to the peculiarity of its print heads (double channel - two colours each), is able to perform almost like a 32-head printer."

According to the company, the advantages of the ArioPrint is that it has "flexibility, productivity, quality and precision." The machine is equipped with Kyocera print heads KJ4B, with 300 dpi

resolution which, according to Macchi, "gives an opportunity to print very different solutions, starting from 300X300 dpi up to 1200 X 1200 dpi and with all the mixed resolution (300X600, 300X900, 300X1200 etc)."

While all electronic configurations and hardware are Arioli's own property, the ArioPrint has an "open system" when it comes to inks. "The customer can use all the inks approved by Kyocera and the machine can print on any kind of substrate (polyamide, silk, wool, cotton, viscose, polyester, etc), with a range of inks, acid, reactive and disperse," Macchi added.

"The building philosophy which has driven the ArioPrint project since the first step, has always been oriented to create a machine which was able to guarantee the

maximum stability and solidity, in order to achieve the best jetting precision. A result is a four-tonne machine, with monolithic welded stainless steel, combined with an aramid fibre belt equipped with an advanced automatic system of measurement and positioning," Macchi continued.

The ArioPrint can also be integrated into the Group other product lines, such as its steamers, washers and dryers.

The ArioPrint was recently shown and FESPA 2017 in Hamburg, where the company also displayed its iQ-Digital, the new digital hybrid machine for the DTF industry.

Arioli SpA is represented in Pakistan by Texsol Pvt Ltd and can be contacted at amir.mirza@texsol.pk ♦

Speed is nothing without precision.
Arioli knows it well.

If you are looking for maximum speed without compromising the best jetting precision, ArioPrint is your best choice.

The winning features of ArioPrint are:

- High stiffness, obtained thanks to welded stabilized monolithic structure
- Direct drive kinematic system
- Data transmission by optical fibers
- Double channel printing head with 300 dpi native resolution
- Top printing quality at 250 mt/h with 600×600 dpi

That's reality, not just a promise.
